

Now, software to pick career option for you

Guides according to budget, marks and ambition

Preetinder Singh

Ludhiana, March 1

IF YOU are confused about choosing a right career after matric and senior secondary level, a software developed by Guru Gobind Singh Study Circle could be of immense help to you. After about two years of hard work, the new software, Career Management System, would be soon distributed among schools.

After passing X or XII class one have to decide about best-suited career options for him or her. At this crucial time, students depend upon their teachers and parents, but the limited knowledge available to them, many a time deprived them of vast career options. As professional career consultancy is limited to big cities, this software would help a large number of students in

finding right career for them.

To locate a right career, one needs to fill his or her educational qualification, pass percentage, ambition and ability to spend money. Iqbal Singh, director, Social Empowerment and Economic Development, said that the aim was to enable students take right decision about their career choices. "By just typing a few words, software will bring a sea of options available in any given stream. Also, help him or her to know about institutions providing these courses," he said, adding that further search would provide information regarding percentage required and fee structure.

"We are going to tie-up with different schools to install this software in one of their computers, so that students can easily access it. In future, we are planning to upgrade it for

job search also," said Ravi Inder Singh, who has worked on the project.

He informed that they had engaged experts from different fields for collecting data related to various careers. For example, to know career option available in veterinary science, they took help of senior veterinary professionals and this was followed in other streams also, he said.

He said to develop this software they had gathered a lot of data. "This will help students in getting specific career or institution options after considering their marks and budget," he said. This was not available in any software introduced so far, he claimed. "Another advantage attached to the software is that it will inform whether searched institute is UGC or NAAC approved or not," he added.
